

PRODUCT DESCRIPTION

Lucerna BioShield is a ready-to-use remedial wash for the curative and preventive treatment of surfaces affected by mould, algae and lichen. It acts on the micro-organisms themselves rather than bleaching the stain: growth embedded in the pore structure of mineral substrates is treated in place, and the loosened residue is then removed mechanically. The product is supplied at working strength and must not be diluted or mixed with other cleaning agents. On surfaces due to be repainted, BioShield is also applied as a preventive treatment before coating — biological growth left under a new paint film destroys appearance, damages paint adhesion and holds permanent moisture against the substrate, and is a common cause of early paint failure.

KEY DATA

Product type	Water-based biocidal remedial wash — effective against moulds, algae and lichens
Supplied form	Ready to use — do not dilute; do not mix with any other cleaner or chemical
Action	Dual: curative removal of existing growth + preventive protection against regrowth
Substrates	Stone, concrete, render / plaster, tile
Application	Brush, roller or sprayer — wet the affected area thoroughly, slightly past the visible edge
Coverage	1 litre » approx. 4–5 m ² depending on surface porosity
Acting time	Leave to act approx. 1 hour before removing residue (verified in in-house testing)
Residue removal	Stiff brush or pressure washer, as the surface allows
Preventive use	Apply to the cleaned, dry surface before repainting; re-treat at first sign of regrowth
Packaging	1 kg · 5 kg
Storage	Sealed original container, cool, out of direct sunlight, out of reach of children

NOTE ON VALUES

Coverage assumes sound, moderately porous mineral surfaces. Rough or highly porous render, old concrete and heavily colonised areas consume noticeably more. Figures here are typical guidance only, not a specification.

APPLICATION NOTES

- BioShield treats the organism — it is not a stain bleach. Dark staining from growth that died and embedded years ago may not vanish on its own; use the brushing / pressure-washing step to remove it after treatment.
- Treat slightly beyond the visible edge of the growth. Colonisation always extends further than the eye can see.
- Never mix with other cleaning products. Mixing can destroy the effectiveness of the wash or cause unwanted reactions — use it neat, on its own, exactly as supplied.
- Permanently damp, shaded surfaces will eventually be recolonised. Preventive treatment extends the clean period substantially, but the lasting fix is to address the moisture source (waterproofing, drainage, airflow).
- For maintenance, re-treat as soon as staining or growth reappears — do not wait for it to spread.
- For repaint work: treat, remove residue, let the surface dry fully, then paint.

HEALTH & SAFETY

Wear rubber gloves and eye protection during application; avoid contact with skin and eyes — in case of contact, rinse with plenty of clean water. Harmful to aquatic life: prevent the product and rinse water from entering fish ponds, aquaculture and drains that lead to natural watercourses. Keep out of reach of children and pets. Refer to the pack label (GHS05 · GHS07 · GHS09) for hazard pictograms and PPE guidance.
